

Looking for Cold or Allergy Medicine?

*Please ask a clerk or pharmacist
for the medication.*

A tough new law is making Indiana safer.

Some cold and allergy medications contain ingredients used in the production of deadly methamphetamine—an illegal drug that is undermining our communities.

That's why we have safely moved these medications behind the counter and you will have to ask for them. In addition, because of a new Indiana law, to purchase these medications you must now:

- Be 18 years of age or older
- Have a valid state or federal ID
- Sign a log provided to this retailer by the Indiana State Police.

Used as directed, these common cold and allergy medications are proven safe and effective, but when purchased in large quantities and “cooked” with other ingredients they will kill. That's why we have joined MethWatch and the Meth Free Indiana Coalition to limit the sale or theft of products used improperly to manufacture Meth and help educate the public about its dangers. Help us continue to stock the medicines you need by supporting the fight against Meth production in our community.

The destruction of Meth is nothing to sneeze at.
